

# HACK MY WEBSITE

## Sample Security Assessment Report

Illustrative sample for AI-built website security scans

RISK SCORE

68

HIGH RISK BEFORE LAUNCH

Domain: <https://launch-ready-demo.ai>

Date: 19 May 2026

Summary: Public admin exposure, source-map leakage, and missing browser hardening make this the kind of site attackers can map and probe quickly.

### What matters most

- A public /admin route is discoverable on the open internet.
- Production source maps expose application structure and internal paths.
- Missing CSP and weak cookie/session settings increase exploitability.

### Top findings in sample

- CRITICAL** Public admin route discoverable
- HIGH** Production source map exposed
- HIGH** Missing Content-Security-Policy
- MEDIUM** Overly broad CORS on API route
